Bring me the part that keeps breaking.

I fix the underlying problem, not the symptom, and I can set your team up to ship with AI agents. Staff Engineer at Findem and two-time Co-founder & CTO: PingPong (YC W21, acquired by Grain in 2022) and Pradini. Self-taught, building since 2013.

What I Fix

- **Architecture:** A system that has outgrown its shape, or a rewrite that has stalled.
- **Payments and ledgers:** Escrow, payouts, refunds, wallets and double-entry ledgers that have to be right.
- **Search:** Finding the right result, or the right person, fast.
- **Shipping with AI agents:** A crew of agents that builds inside checks, so you can trust what merges.

Case Studies

Grain 2022

A rewrite had stalled for months because it was planned as one big switch.

- **What I did:** I made it a gradual move, one part at a time.
- **Result:** It reached production in about a month and became the team's playbook.

Findem, after it acquired Getro 2025-26

Members needed the strongest route to someone through the people they already knew.

- **What I did:** I built friend-of-a-friend path search that ranks the strongest routes, and kept it in Postgres rather than add a graph database.
- **Result:** It answers almost instantly, with one database to run. The speed came from better queries.

Ollic Growth District 2026

Buyers in Uyo own documented land from as little as 5 square metres and pay in instalments, so the ledger has to be right.

- **What I did:** I built it in partnership: a double-entry ledger, instalments and KYC, with Postgres for jobs, queues and locks. No Redis: at this scale it wasn't needed.
- **Result:** It is live at ollicgrowthdistrict.com.

The Crew 2026

Agents write code fast. The hard part is trusting what they write.

- **What I did:** I build the jig. AI builds the part. One model plans and reviews, agents build in 3 isolated lanes, and an automated check with no AI in it tests every change. A script merges one at a time.
- **Result:** Pradini is built this way, by one engineer and a crew of agents.

Experience

Pradini, Co-founder & CTO *(began as a side project alongside Findem)*	2025 – now
Findem, Staff Engineer	2025-26
Getro, Senior Engineer	2022-25
Grain	2022
PingPong, Co-founder & CTO *(YC W21, acquired by Grain)*	2020-22
Unbird, first engineer	2018-20
InVision	2017-18
Andela, Software Developer, then Tech Team Lead	2016-18
Freelance web work	2013

How to Engage

Email hello@enahomurphy.com. Tell me what's breaking. I work remotely, from Lagos, and pricing is on request. More of the work: enahomurphy.com/projects.
